Fire Department Replaces Firetruck

GLENWOOD SPRINGS, CO – The Glenwood Springs Fire Department has added a new, 100' heavy-duty platform truck to their fleet. The City and Fire Department have been saving for several years to replace an outdated, 28 year old ladder truck.

Fire Chief Gary Tillotson stated, "We are very excited about the capability of the new truck. This truck brings modern technology to the department and increased safety during fire operations."

The new Pierce aerial platform provides Glenwood Springs superior capability in rescue, ventilation, and fire extinguishing capacity. In addition to having all the functionality of a fire pumper, the platform's aerial devise provides an elevated working platform for enhanced firefighter safety during operations around buildings as high as six stories.

This truck will allow firefighters to safely provide more robust emergency response to incidents in the community requiring aerial operations.
